DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 12/29/2000 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being participated by Chiu et al (U.S Patent No. 6,597,689 B1).

Regarding claims 1, 15, 16, Chiu discloses a method for auto-configuring a Permanent Virtual Circuit (PVC) of a customer premises equipment device over an Asynchronous Transfer Mode (ATM) network, said method (col.7 lines 45-50) comprising:

receiving a plurality of ATM cells from a digital subscriber line access multiplexer; checking said plurality of ATM cells for an Operation and Maintenance (OAM) cell, said OAM cell allowing the PVC to be auto-configured by obtaining a Virtual Path Identifier (VPI) and a Virtual Circuit Identifier (VCI) from said OAM cell (col.20 lines 40-50);

configuring the PVC by obtaining said VPI and said VCI from a first ATM cell; and linking the PVC to a protocol, said protocol being applicable to DSL (col.25 lines 10-30).

Regarding claims 2, 9, Chiu discloses ATM cell further includes a header and a payload, said header comprising a VPI and a VCI (col.17 lines 10-15).

Regarding claim 3, 10, Chiu discloses that OAM cell is used for exchanging control and maintaining the ATM network running (col.28 lines 35-40).

Regarding claims 4, 11, 14, 17, Chiu discloses that first ATM cell is determined by measuring an elapse time between a previous ATM cell and said first ATM cell (col.41 lines 20-60).

Regarding claims 5, 7, 18, 20, Chiu discloses that protocol further includes Point-to-Point Protocol (PPP) interface or Request-For-Comments (RFC) bridge interface (col.60 lines 55-65).

Regarding claims 6, 12, 19, Chiu discloses that receiving a plurality of messages from an aggregate router, said plurality of messages being a plurality of Link Control Protocol (LCP) configuration requests or a plurality of Bridge Protocol Data Unit (BPDU) spanning tree messages (col.84 lines 15-45).

Regarding claim 8, 13, Chiu discloses an Asynchronous Transfer Mode (ATM) communications system comprising: a digital subscriber line access module receiving said plurality of ATM cells; and

a customer premises equipment device having a mechanism which auto-configures a Permanent Virtual Circuit (PVC), said mechanism receiving an ATM cell, said mechanism checking said ATM cell for an Operation and Maintenance (OAM) cell, said OAM cell allowing configuring said PVC by reading a Virtual Path Identifier (VPI) and a Virtual Channel Identifier (VCI) from said OAM, said mechanism linking said PVC to a Point-to-Point Protocol interface or an RFC 1483 bridge interface (col.28 lines 35-60).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-Bossemeyer, Jr. et al (US Patent No. 6,285,671 B1) discloses Method and system for providing facsimile service over a digital subscriber line.

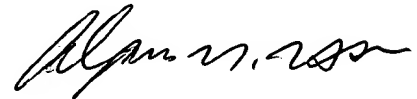

-Rawson et al (US Patent No. 6,028,867 B1) discloses system and method, and network for providing high speed remote access from any location connected by local loop to a central office.

-Hawley (US Patent No. 6,480,494 B1) discloses switching system data interface.
